

## CASE STUDY:

Fusion Surfaces: Efficient Door Refurbishment at Scale

MAKING A MATERIAL  
DIFFERENCE

### WHEN PREPARATION AND SUPPLY ALIGN

When Fusion Surfaces took on a hotel door refurbishment project in Inverness, the brief was clear: upgrade over 100 doors within a tight programme. But with a full day of travel either side for the installation team, time on site had to be used efficiently.

“As soon as you add travel time into a project like this, every hour on site matters,” explains Rosie Christie, Director at Fusion Surfaces. “We needed to be able to arrive and start work immediately.”

Using **LX Hausys Benif interior film**, supplied by All Print Supplies, the team were able to do just that. Delivering a consistent oak woodgrain finish across every door, combining durability with a high-quality aesthetic suited to a live hotel environment.

### PLANNING AHEAD

Preparation was key. Working closely with the APS team, Fusion Surfaces provided full door schedules and measurements in advance. Rather than supplying standard rolls, APS pre-cut the LX Hausys Benif film to size before delivery.

“It completely changed how the job ran,” says Rosie. “We weren’t measuring and cutting on site. We could get straight into the installation.”

### KEEPING THINGS MOVING

With installation and joinery teams working across multiple floors, coordination was critical. Because materials were prepared in advance and delivered in line with the programme, each phase of the project flowed without interruption.

“There’s nothing worse than having a team ready to go but being held up by materials,” Rosie adds. “On this project, that was never an issue and everything was ready when we needed it.”

On a live hotel site, where work must be carefully managed around guests and operations, that level of reliability is essential.

## LX HAUSYS BENIF INTERIOR FILM

→ **Type:**  
Architectural interior film

→ **Finish:**  
Premium Wood-Oak

### TOP FEATURES

- Finish: realistic woodgrain appearance and texture
- Durable surface designed for high-traffic environments
- Suitable for doors, furniture, leisure clubs and more
- Minimise landfill, disruption and revenue loss
- Maximise budget, occupancy and wow factor

# “ ”

When you're working at that scale, product consistency and supplier reliability are everything.

Rosie Christie  
Director, Fusion Surfaces

### FOCUSED INSTALLATION

The result was a smooth, efficient installation, with over 100 doors refurbished in just 10 days, delivering a premium oak woodgrain finish from the LX Hausys Benif range, aligned with the hotel's interior scheme.

### VALUE IN PRACTICE

The right approach to supply can influence outcomes. It's not just about having the right material. It's about having it ready, in the right format, at the right time.

"The support from APS made a genuine difference on site," Rosie concludes. "It allowed us to work as efficiently as possible, even with the challenges of the location."

Because when preparation, product and logistics align, installation becomes faster, smoother and more reliable.

And that's what makes a material difference.
