Improving Sustainability Within The Wide Format Market

All Print Supplies
moves to improving
sustainability issues
within the
wide format print market.

Evolve *Diversity* Create

We have been working hard for some time with our various suppliers to create a range of media that meet some of the increasing demands for a more sustainable print industry.

This is a long term project with many obstacles faced by manufacturers to find solutions that can print and perform to the same standard as PVC based materials.

With these materials we have been able to provide some alternatives to the PVC based versions, still enabling our customers with creative options in the graphic display market for retail, office, leisure, vehicle branding and more.

Our current printable, finishing and signage non PVC range includes the following materials from:

■ Printable

JT 5425 PUV White polyolefin film for internal/external walls, floors, window displays, POS.
Widely used during the 2012 games and brands such as L'Oréal.

Over the last 3 years
we have been heavily investing in a
new manufacturing company
to enable us to diversify
our product offering.

Nu-Coat has the ability to coat
PET, PP, PE, Paper, PU films.

For specific projects we are aiming to offer
bespoke solutions to minimum order volumes.

**Zero VOC Emissions
+ Environmentally Friendly
= Clean Air**

Chain Of Responsibility

Manufacturer Distributor

Producer / Printer

Installer

And then ...

Recycle / Landfill ...?

Conclusion

- Recycling is still an unknown area
- No case studies are available currently
- Information is hard to quantify with manufacturers
 - Local authorities are still impotent with little or no advice or action
 - Waste to energy / solutions available
- Print companies need to be more proactive, for example reducing their waste
- Plenty of box ticking of non-PVC media but no real understanding of what this actually entails
- Greenwashing = a term for muddled and cloudy information / misinformation (e.g. whitewashing)
- Positive... now at the forefront of our industry's awareness
 - Our PVC is REACH compliant
